ILLUSTRATIONS—Continued

24. A, Overturned fold at Ormrod. Jacksonburg strata dip under older Beekmantown; B, Complicated fold of Beekmantown strata, Coplay .............................................. 250
25. A, Recent view of the ruins of the Lehigh Furnace west of Slatedale; B, Old view of Crane Iron Company's furnaces at Catasaqua; C, Limonite mines at Iron ton. 251
26. Map showing magnetic surveys in the vicinity of Vera Cruz 316
27. Recent view of Ueberroth zinc mine, Friedensville ......... 348
28. A, Old Hartman mine, Friedensville; B, Limestone breccia in Old Hartman mine, Friedensville ...................................... 348
29. A, Ueberroth mine, Friedensville, while in operation about 1877; B, Recent view of Ueberroth mine 348
30. Ueberroth mill and open cut, Friedensville, in 1877 .......... 349
31. A, Old mill of the Coplay Cement Manufacturing Company; B, Close view of the upright kilns of the Coplay Cement Manufacturing Company .......................... 396
32. Fogelsville plant of the Lehigh Portland Cement Co. .... 396
33. A, Illinoian glacial till in clay pit, South Allentown; B, Surface stripped of clay for brick plant, same pit as above .......................................................... 396
34. A, View southwest from Kern quarries, Slatedale; B, Anticline of Eureka quarry, Slatedale ................................. 396
35. Structure sections at Slatington and Slatedale ............. 413
36. A, West part of Slatington with slate quarries; B, View of typical slate quarry ............................... 396
37. Slate quarry operations. A, Quarrymen pry a slab loose; B, Hoisted to the surface, the slab is loaded on a truck; C, Cutting a slab of slate by circular saw 396
38. Slate quarry operations. A, Splitting the slate; B, Trimming the slate to shingles; C, Punching nail holes in shingles .................. 396
39. A, Sand and gravel pit at East Allentown; B, Typical Hardenston sandstone quarry ....................... 397

Figure 1. Section of jasper pit showing refuse layers, fire sites ...... 18
2. Wind diagrams for January to June .............................. 102
3. Wind diagrams for July to December .................. 103
4. Physiographic subdivisions of Pennsylvania ........................ 106
5. Cross section of Jordan Creek valley showing alluvial fill 121
6. Sketches showing drainage changes in the vicinity of Lehigh Gap ...................................................... 131
7. Columnar section of rocks in Lehigh County ............... 141
8. Cross section of pre-Cambrian belt of Lehigh County .... 153
9. Map showing the distribution of the Jacksonburg lime stone in Lehigh County .................................................. 202
10. Diagrams explaining the structural relations of the Jacksonburg limestone ........................................ 212
11. Sketch map showing distribution of the Martinsburg and other clastic sediments .......................... 214
12. Sections across the Martinsburg formation by Behre, Stose and Willard .............................. 223
13. Map of Friedensville zinc mines .................................. 351
14. Section across Hughes quarry to show inferred structure 407
15. Sharp anticline with northward overturning, in Lehigh Gap quarry ........................................ 408
16. Typical folding of the slate beds, near Slatington, in Eureka quarry .................................. 411
17. Fold in wall of Manhattan quarry near Slatedale .......... 415
